

Your uncomplicated
impression aid

DMG Retraction Paste
for conventional and
digital impressions

Perfect for both classic and digital impressions. DMG Retraction Paste

Every accurate restoration relies on a precise impression. DMG Retraction Paste is particularly helpful here:

Temporary sulcus widening has never been this easy or effective – and there is also an astringent effect on the gingiva.

The compule made of special resin can be positioned exactly as desired. It can be bent to your preferred angle, allowing you to work comfortably anywhere in the patient's mouth.

The homogeneous consistency of DMG Retraction Paste has been optimally adjusted. Thanks to its high stability, the material remains in the spot where it was applied and, once there, it takes effect.

Indications:

Temporary marginal gingival retraction and a dry sulcus environment

Benefits:

- Perfect for use in conventional and digital impression procedures
- Flexible tip for the simplest application
- Use of standard composite dispensers
- Remains secure in the sulcus thanks to optimum consistency
- Made from a base of natural alumina
- Good colour contrast

Compule tip inserted into the sulcus.

Application of the retraction paste.

Allow the paste to absorb into the sulcus to enable the gingival retraction.

The retraction of the tissue takes place mechanically.

A smile ahead
together

Product overview

DMG Retraction Paste

Pack: 25 Compules @ 0.37 g REF 919381
